1. MILESTONE BREAKDOWN

Milestone	Description	Hours	Cost (USD)
1. Existing MVP Enhancement & User Management	Enhance the existing MVP by refining the onboarding flow, questionnaire, multi-angle image upload, report flow, database integration, user authentication, role-based access (User/Admin), report status workflow (Draft → Pending Review → Approved → Published), and overall application architecture.	28	\$616
2. Replit Migration & Deployment	Migrate the existing application to Replit, configure the development environment, deploy the backend and frontend, ensure compatibility, and establish a clean codebase for future development.	14	\$308
3. AI Report Enhancement & PDF Export	Enhance the existing facial analysis report, integrate OpenAI to generate AI-assisted explanations, personalized recommendations, and improvement protocols while preserving the existing Computer Vision analysis pipeline. Implement downloadable PDF reports for approved analyses and improve the overall report presentation.	28	\$616
4. Payments & User Workflow	Integrate Stripe and PayPal, implement payment validation, email notifications, Meta Pixel, Google Tag Manager, and the complete post-payment workflow.	18	\$396
5. AI Visual Features	Integrate AI-powered hairstyle visualizations (5 variations), outfit visualizations (5 variations), and aging simulations (Current / +10 Years / +20 Years), including prompt engineering, image generation workflow, frontend integration, and user experience improvements.	40	\$880

6. AI Beauty Assistant (ChatGPT Integration)	Integrate a ChatGPT-powered assistant that answers questions related to each user's approved facial analysis report, recommendations, and facial measurements, including conversation history within the user's account.	20	\$440
7. Admin Panel & Report Management	Develop an admin panel to review, edit, verify, and publish AI-generated reports before making them available to clients. Include report management, configurable recommendations, and content administration.	20	\$440
8. Client Dashboard	Develop the client dashboard with report history, report status, approved report viewing, downloadable PDF reports, payment history, profile management, and future access to AI conversations.	20	\$440
9. Testing, Optimization & Final Deployment	Perform end-to-end testing, bug fixing, performance optimization, final Replit deployment, documentation, and project handover.	16	\$352

2. PROJECT SUMMARY

Item	Details
Total Estimated Hours	204 Hours
Hourly Rate	\$22/hour
Total Estimated Cost	\$4,488 USD
Estimated Timeline	Approximately 5 to 6 Weeks (40 Hours/Week)

3. NOTES & ASSUMPTIONS

- The estimate assumes that the existing MVP, including the onboarding flow and the MediaPipe/OpenCV-based facial analysis engine, will be reused and enhanced rather than rebuilt from scratch.
- Facial landmark detection and mathematical measurements will continue to use **MediaPipe** and **OpenCV**.
- The application will be migrated to **Replit**, allowing your team to continue enhancing and extending the platform after delivery.

- OpenAI APIs will be used for AI-generated report explanations, personalized recommendations, the conversational assistant, and AI-powered visual features where applicable.
- AI-generated visual features, including hairstyle visualizations, outfit visualizations, and aging simulations, will leverage OpenAI Image APIs or equivalent image generation models depending on the selected implementation.
- AI-generated image quality depends on the capabilities of the selected AI model. While we will optimize prompts and workflows to achieve the best possible results, the exact realism, identity preservation, and visual quality cannot be guaranteed, as they are influenced by third-party AI services.
- If significantly more advanced image generation or additional prompt engineering becomes necessary to achieve production-quality results beyond the agreed scope, we will discuss the additional effort with you before proceeding.
- OpenAI will enhance and explain the analysis results. It will **not replace** the existing MediaPipe/OpenCV-based facial measurement pipeline.
- Reports will follow an approval workflow (**Draft** → **Pending Review** → **Approved** → **Published**) before becoming available for client viewing and PDF download.
- **OpenAI API usage costs are not included** in this estimate and will be billed separately based on actual consumption.
- **Third-party API or service costs** (including image generation, email services, cloud storage, or other external services) are not included in this estimate and will be billed directly by their respective providers.
- **One round of revisions is included for each milestone.** Additional revisions or feature requests beyond the agreed scope will be estimated separately before implementation.
- AI-generated responses, recommendations, and images are produced by third-party AI models. While we will optimize prompts and workflows for consistency and quality, outputs may vary over time as these AI models evolve and are updated by their providers.
- Any additional functionality requested outside the agreed milestones will be considered a scope change and will be estimated and approved before development begins.

4. CLIENT RESPONSIBILITIES

To help ensure the project progresses smoothly and stays within the proposed timeline, we kindly request the following:

- Provide access to all required third-party services, including **OpenAI, Stripe, email service, Meta Pixel, Google Tag Manager**, and any other APIs required for the project.
- Provide branding assets, including the logo, color palette, application content, report content, and any other design resources required for implementation.

- Review milestone deliverables and provide timely feedback and approvals to help maintain the proposed schedule.
- Share any additional business rules, report templates, or reference materials required during development.
- Notify us of any changes in requirements as early as possible so we can assess their impact on the project scope, timeline, and cost.
